

New designs appear in baby furniture, too. White plastic tile decorates the birch chest and crib. "Noiseless" drop sides have plastic teething rails. The crib spring is adjustable and back legs are on casters. The chest is commodious enough to be useful through teen-age. From Lullaby Furniture Corp.

HERE'S HOW...

MAKE A CARD TABLE CABINET

Storage for a card table and chairs is provided by an attractive cabinet. In cutting the pieces to the sizes shown, a mitre box should be used to assure square ends. The base is assembled first, using glue and dowel joints. Next make the lower cabinet, using glue and dowels or glue and 6-penny finishing nails. A display panel of hardwood plywood may be used for the back; or, it may be paneled with boards. The doors may be

either edge-glued 1 by 10-inch lumber or hardwood plywood. Fasten the lower cabinet to the base with glue and 6-penny finishing nails. The top, open cabinet is fastened to the lower cabinet with glue and 6-penny finishing nails. Trim the top with door frame molding, as shown. Set all nail heads, fill the holes with wood putty, sand smooth and round all sharp edges before finishing.

National Lumber Manufacturers Association

Wood Keeps Its Vital Role As Home Building Material

In an era when science is constantly coming up with new "miracle materials," why is nature's oldest building product, wood, still so vital in home construction?

Here are a few of the most important reasons:

1. Beauty. The texture, grain, and color of wood can't be duplicated in the laboratory. These qualities help give the home the warmth and richness of appearance it should have.
2. Warm to the touch. In windows of ponderosa pine, for example, the inside of the sash and frame stay warm, even in the coldest weather. This keeps moisture from collecting and running down to damage interior paint and wallpaper.
3. Decoration. Wood can be painted, enameled, stained, or given a clear, natural finish.

This is important to home decorating, inside and out.

4. Low labor costs. Windows of ponderosa pine are available in units with frame and sash fitted together at the factory. The unit is simply slipped into the opening, and nailed in place.

5. Long life. Wood will last as long as any other component of a structure. Wood windows and doors of ponderosa pine are scientifically treated with preservatives to strengthen their natural resistance to weather.

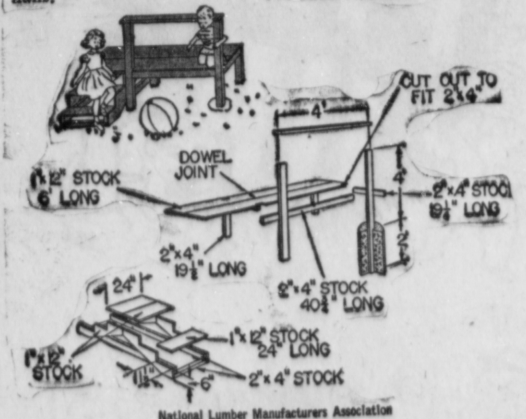

6. Variety of design. Wood windows and panel doors are available in stock from building material dealers in numerous styles and sizes.

7. Versatility. The easy workability of wood makes it possible to manufacture stock windows, doors, and panel and louver doors of ponderosa pine to suit any architectural design.

HERE'S HOW...

MAKE BACKYARD PLAY EQUIPMENT

Backyard play equipment provides fun for small children and keeps them from the hazards of traffic. The frame for the platform is made of 2 by 4-inch lumber, cut to length, as shown, with the 6-foot posts set in concrete. The platform top is edge-glued 1 by 12-inch lumber with dowel joints every 6 inches. Assemble the platform, with 6-penny and 10-penny common nails.

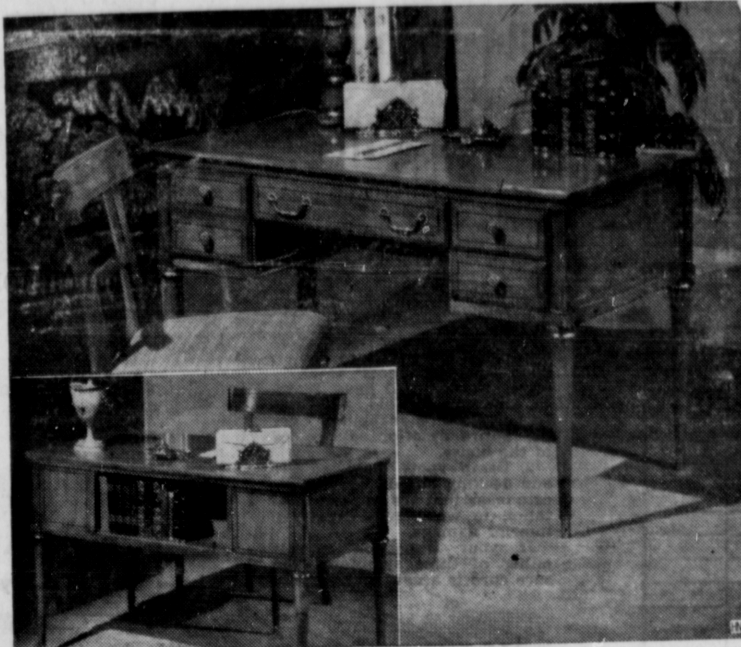

National Lumber Manufacturers Association

Today's jalousie windows make it easy to add a room or enclosure a porch. Controlled ventilation and beauty are two features of this type of window.

Correlated furniture for country homes and family rooms is represented in this group by Habitat Shops, Inc. New this year is the octagonal supper table with eight wedge chairs. Arms and large top surfaces of the knotty white pine furniture are covered with plastic to prevent burning and scratching. Chairs have reversible zippered covers. Note the new lightweight chair with leather seat and back.

Typical of the well thought out design and utility one finds in correlated groups of furniture is this desk which is handsome viewed from either side. Italian Provincial in styling, it would make an attractive room divider, separating a conversation group from a more quiet corner. It is a part of a large group called "My Fair Lady" by Hickory Manufacturing Company.

BUILT-IN LANDSCAPING provides privacy by screening adjoining back yards and gives residents a pleasant view through this wall of Thermopane insulating glass. A variation of Japanese styling, the "landscape unit" is made up of trees, shrubs and flowers which are chosen for the cover they give. By using this "man-made" beauty, homeowners living in crowded residential areas can enjoy the full benefits of light and spaciousness inherent in contemporary, indoor-outdoor living.

Business and Professional
WOMEN'S CLUB

These pieces are designed not only to "go-with" each other, but literally go-with the easy and harmonious way most homes are being furnished today. Scaled for the average size house or apartment, the biggest decorative problems have been solved by designers and color stylists in this group from Dixie Company.

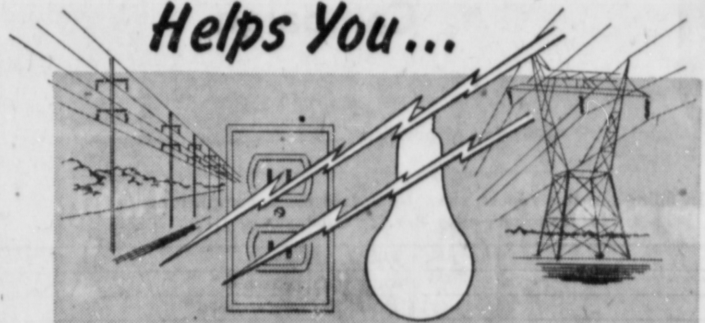

Space saving is a problem in a small house or apartment—and a newlywed's first quarters are apt to be small. This flip-top dining table is a compact solution. After dinner it fits neatly over the buffet. Since this smart idea was introduced over ten years ago by the Grand Rapids Chair Co., thousands of young families... and older ones too, have found it the answer to their needs. The straight lines and cane doors remain high-style, a lesson in the timelessness of simplicity.

Prevent Fires From Ruining Summer Home

An all-purpose item like a galvanized steel pail comes in mighty handy for vacationing families who seldom have room to take everything necessary for an extended trip. Pails can be used for auxiliary fire protection, carrying sand, and even as a soft drink carrier for picnics.

Fire officials point out that most fires in summer homes are caused, as anywhere else, by carelessness. Since summer homes are seldom located near organized fire departments, they should be equipped to handle any emergency until help arrives. A fire extinguisher and several galvanized steel pails, filled with sand or water, should be placed at strategic spots around the house.

Often vacationers fail to take necessary safety precautions with rubbish that can accumulate quickly without regular collection service. Galvanized steel refuse cans should be used to eliminate this hazard, fire officials point out. These zinc-coated cans are made from fire-proof steel and are equipped with sturdy covers to confine any blaze before it can get a start.

Sparks from burning rubbish can start dangerous and costly roof fires. One of the best ways to burn rubbish around a summer home is in a perforated galvanized steel rubbish burner, equipped with a cover, and designed to permit free air circulation to the interior of the burner.

7 Points Given On Fruit Spraying

Paul Keen, Perry County Agricultural Agent
John Caudill, Associate Agricultural Agent

Spray Schedule For Apple Trees:

To have good quality fruit, it is essential that an adequate spray schedule be followed. Following is a spray schedule prepared by the Horticultural Department of the University of Kentucky.

A complete spray schedule for apple trees should include seven applications, starting while the trees are dormant and continuing until about July 10th.

1. The first application should be applied while the trees are still dormant to control scales and red mites. Use 1-2 cup per gallon of water of a 3% oil emulsion.

2. The second application of spray material should be applied during the pink bud stage or just before bloom, to control apple scab and cedar rust. For this application, use either 4 tablespoons of ferbam or 4 tablespoons of dry lime-sulfur per gallon of water.

3. The third spray should be applied when trees are in full bloom. Use 1-2 teaspoon of streptomycin per gallon of water for the control of apple and pear blight.

4. Ferbam 3 tablespoons or wettable sulfur 5 tablespoons and arsenate of lead 2 tablespoons per gallon of water should be applied when most of the petals have fallen. This application is to aid in control of apple scab, cedar rust and codling moth.

5. Three weeks after petals fall, an application of captan 2 tablespoons and lead arsenate 2 tablespoons or D.D.T. (50% wettable powder) 2 tablespoons per gallon of water, should be used to control apple scab and codling moth.

6. Two weeks after 5th application, use same materials as used in the 5th application.

7. About July 1st, use same materials as used in the 5th and 6th applications.

Following this schedule closely will mean the difference in having good quality fruit, and fruit that is, in most years, worthless.

For a copy of a circular (C-521) on spray schedules for home fruit plantings, contact your County Agent.

Recipe of the Week

Either you like it or you don't!

That's the way it is with many people and rhubarb, but to those who do enjoy it, its distinctive flavor and inviting pinkish coloring make it one of the most tempting of early spring foods.

Mrs. Lucille E. Warren, UK Extension foods specialist, recommends baking of rhubarb as a simple way to prepare it. To 2 cups of the fruit cut in 1-inch pieces, add 1 cup of sugar. Place the rhubarb in a casserole, sprinkle with sugar and bake at 325 degrees for about 40 minutes. For a less concentrated dish, a small amount of water may be added if desired.

Another simple dessert is the following:

Rhubarb Brown Betty
1 lb rhubarb cut in 1-inch pieces
¼ c butter
1 c sugar
1½ c soft bread crumbs
¼ t nutmeg

Melt the butter and stir in the bread crumbs; place one-third of them in a buttered baking dish and cover with half the rhubarb and sugar to which the nutmeg has been added. Repeat, covering with a final light layer of crumbs. Bake 30 to 40 minutes at 325 degrees. Serve with thin cream, hard sauce or ice cream.

Menu: Fried ham with cream gravy, buttered lima beans, spinach, peach and cottage cheese salad, biscuits, butter and rhubarb brown betty.

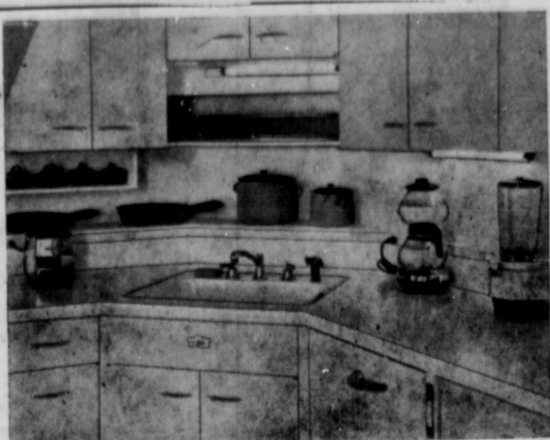

City Soldier

Completes Training

MURNAU, Germany (AHTNC)—Pfc. Benny P. Kelly, 19, son of Mr. and Mrs. Charlie T. Kelly, Hazard, Ky., recently completed the demolitions, mines and booby traps course at the Army's European Engineer-Ordance School in Murnau, Germany.

During the five-week course, Kelly received training in laying and removing mines and booby traps and firing demolition charges on roads and bridges.

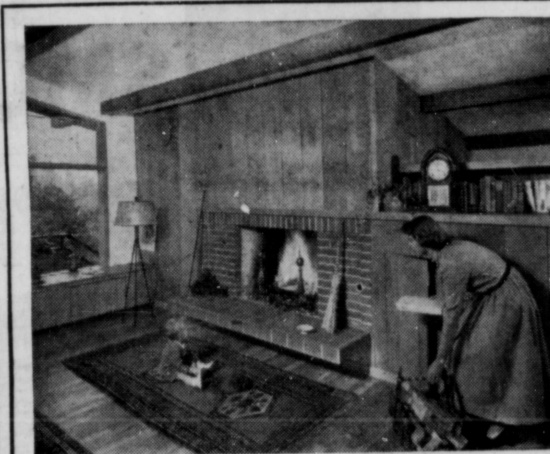

He entered the Army in February 1957 and arrived in Europe the following August. Kelly was graduated from Hazard High School in 1956.

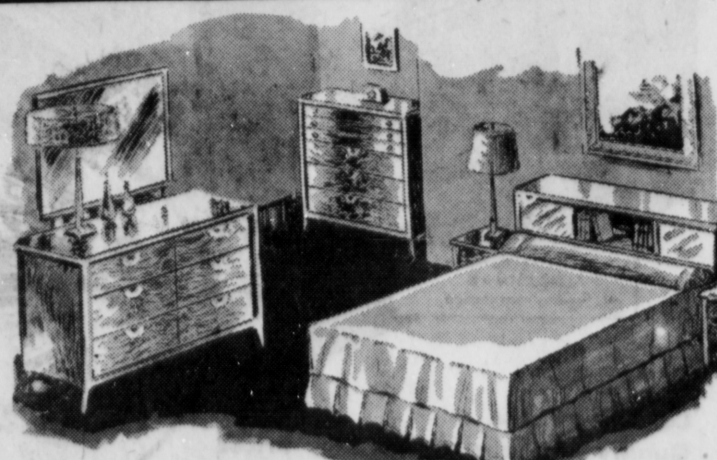

There are plenty of outlets for small electrical appliances in this modern kitchen. Plugmold, multi-outlet assembly produced by The Wiremold Company, Hartford, Conn., has been installed directly over the countertop. Duplex receptacles at convenient intervals afford sufficient outlets to keep frequently-used appliances plugged in, at the same time permitting outlets for less commonly-used electrical aids.

LIVING WITH THE OUTDOORS is a pleasure in this contemporary living room. A window wall of Parallel-O-Grey polished plate glass, including wind screen, bathes the room in softened natural light and brings it together with the outdoors in an unbroken feeling of spaciousness. Glare and solar heat are reduced by the special grey glass without appreciably altering colors.

Here is a truly outstanding living room with exposed beams, fireplace wall and built-ins constructed of one of the world's most beautiful woods—California Redwood. The warm glow of a fire reflecting the highlights in the rich, red tones of this wood makes this room write its own invitation to comfortable living.

Louvers Add Beauty

Folding Wall Practical

New designs in sliding and folding door hardware available today have "opened the door" for dozens of new ways to improve the home with room dividers and space-saving partitions.

The drawing shows an example—a room divider that is both attractive and practical. Eight narrow louver doors of ponderosa pine were hinged together like a screen and suspended from a sliding track attached to the ceiling.

In this case, two beds in a bedroom are separated without cutting off circulation of air, since the wood louvers let air pass through. When privacy isn't needed, the screen folds back against the wall.

A similar screen also would be ideal between a dining area and living room, to close off a laundry from a basement playroom, or for any number of uses throughout the house.

The louvers also add the distinction of neat texture to rooms, and the clear ponderosa pine is easy to paint or stain.

Sliding and folding louver doors are equally ideal for closets and doors between rooms—anywhere it is desirable to have free circulation of air.

Roofing Wins Vital Role In Decorating

When a house gets a new roof, it is always because the old one was worn out?

This used to be the case, say roofing contractors across the country, but not any more. Today more and more home-owners are recognizing the role their roof has in making their homes look better. Roofing has become an important decorating material.

Another factor is the economy of a new roof. In most parts of the country, re-roofing with asphalt shingles doesn't cost much more than a quality paint job—sometimes less.

Tired of White

Here are some examples of home-owners who've had new roofs applied for appearance:

1. A family in Ohio, tired of their white house, applied a new beige roof over their dark green roofing and used the new roof as a "color key" to paint the house in soft, pastel yellow.

2. A Michigan family bought an old, 3-story house with a light red roof in good condition. Acting on the advice of an architect, they re-roofed with black asphalt shingles to make the tall house look lower.

Brown More Rustic

3. In California, a man and wife didn't like the green roof on their house because it spoiled their "rustic" decor. They re-roofed with a soft brown blend of asphalt shingles.

HERE'S HOW...

MAKE A SAFETY-GATE FOR SMALL CHILDREN

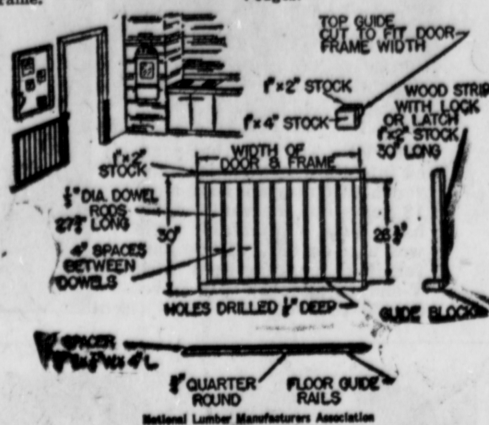

A safety-gate to protect small children is made of 1 by 2-inch lumber and 1/4-inch dowel rod.

Make the frame 30 inches high and long enough to span the doorway.

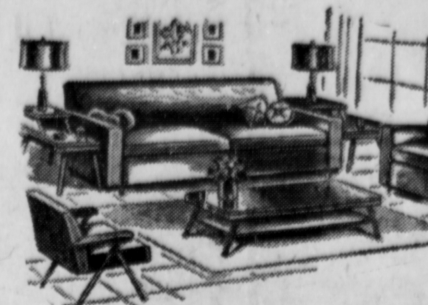

Cut the dowel rods 27 1/2 inches long to allow 1/4-inch insertion in the top and bottom frame members. Use glue and dowels or screws to fasten the frame.

Guide rails for the floor are made of 1/4-inch quarter-round moulding, separated by a 1/4-inch spacer, and fastened to the floor with 4-penny finishing nails. The upper guide block is a piece of 1 by 4 fastened to a piece of 1 by 2; the lower one is a 1 by 2 block fastened to a 30-inch post. Use a latch or lock to hold the gate closed.

Sand smooth, rounding all edges.

in the recipe for prosperity

YOUR HOME is the basic ingredient

Dozens of cures have been suggested for the recession afflicting America's economy. Each, perhaps, has some merit; none, probably, is the whole answer. But certainly one of the most immediate and effective is the transfusion that you and other home-owners can give the economy just catching up with needed home improvement projects—this year.

The new room you need, the modern kitchen or bathroom, the finished attic or basement, the paint or insulation or patio or wiring—any of these can give your family new comfort, new convenience, new pleasure, increased property value . . . and give the economy new jobs and new sales. Your home improvement project, and those of millions of other homeowners who will provide themselves with better living in 1958, can unquestionably help cure our economic headache.

No one modernizes his home, of course, just to help the economy, and we aren't seriously asking you to. But we do suggest that you look into several very important reasons why you will find home improvement possibilities particularly timely right now . . . reasons like these:

1. Prices on all types of building materials and home equipment are especially favorable.
2. More than ever, in times of economic uncertainty, your home is your best investment. Sound, sensible home improvement increases its value beyond the cost of the improvement. In that sense, it's better than money in the bank.
3. More dealers and contractors than ever before are fully equipped to take care of your whole project—all the materials and labor and financing you need—in one stop.
4. Financing is readily obtainable at ideal terms—through your dealer or contractor or direct from your financial institution.
5. Men to do the work are more available, too.

These and other factors add up to one crystal-clear conclusion: Home Improvement, especially in 1958, is a sound investment, a sensible purchase.

Like charity, PROSPERITY begins at home. . . your home

Dawahare's	East Ky. Beverage Co.	Sterling Hardware Co.
Cornett's TV Center	Royal Crown Cola	Home Lumber Co.
Hazard Furniture Co.	Kentucky Power Co.	Herman Maggard's Store
Rolane Gas Co.	E. W. Hacker	Perry County Farm Center

Casual and beautiful, this ash-blond dining group seats eight comfortably. Benches are curved and the table is oval. The server base, with sliding doors, can stand alone or with the open hutch top. Cushions are covered in any of eight shades, ranging from tangerine to brown. The wood is ash with a clear varnish finish and rattan markings. Part of the Ashcraft Line of the Heywood Wakefield Company, this group would grace an informal dining room. It is ideal, of course, for summer homes—long the recipients of cast-off furniture that families were ashamed to have in their winter homes.

Look—Furniture Styles HAVE Changed

ABOVE—The face that peered into the three-section mirror in 1940 may not have aged 18 years but the vanity table has. This "waterfall" style was used in 80% of bedroom furniture manufactured then. V-shaped matched walnut veneer is the wood.

BELOW—Contemporary is a period just as Early American is. Perhaps it would be best to say contemporary is a period without a period at the end of it yet. It represents new thinking and new ideas developing today, as opposed to new interpretations of old designs. Contemporary lines are simple lines. The vanity group, with two chests and a table, is typical. It belongs to the Bassett Furniture Company's "Admiration" collection.

First step in installing new tile is applying adhesive with notched spreader. Special adhesive has been developed.

Then the attractive tiles slip quickly and easily into place. The tiles measure 4 1/4 by 4 1/4 inches square.

Final process is to smooth grout between tiles with a toothbrush handle. Self-spacers assure uniform joints.

ENJOY BEAUTY AND COMFORT

Stylish Bath Now Practical

This colonial bathroom combines the luxury of good taste and fine decor with modern practicality. Its distinctive stained glass window, dutch curtains, window valance, dressing table and accessories complement and enlarge upon the dominant colonial theme. Noted designer Ving Smith specified handsome Marlite woodgrain paneling in the shower area to contrast with pastel ceiling blocks of this same predecorated hardboard material, which can be cleaned with a damp cloth. Marlite Peg-Board panels were used on the storage closet doors to insure proper ventilation, and on the divider between the lavatory and toilet to provide space for hanging shelves, pictures and other items.

Large panels of insulating siding go in place quickly. The courses are staggered as shown so vertical joints don't form a conspicuous line. As its name suggests, this material has effective insulating value. It requires no painting or staining.

This workman is putting up panels of Texture One-Eleven, a handsome grooved fir plywood. The material has deep parallel grooves two inches apart to create a rhythmic, stylized design effect.

MIRRORED WALL adjoins entryway in the Dale Niece apartment in Cleveland. A decorator, Mr. Niece chose this way to make the room seem longer and more luxurious. For such installations, true reflections are wanted and quality plate glass is a wise choice. For example, mirror quality Parallel-O-Plate is ground on both sides simultaneously to obtain precision parallelism and uniformity of thickness.

Saves \$\$ on Heat

Insulation Pays Own Way

INSULATION Where and How Much	Installation Cost (Approx.)	ANNUAL FUEL SAVINGS			
		Zone 1	Zone 2	Zone 3	Zone 4
Attic					
6 in.	\$195	\$24	\$54	\$93	\$111
4 in.	145	23	51	88	105
2 in.	90	19	45	75	89
Walls					
Minimum of 3 in.	\$225	\$11	\$25	\$43	\$51
2 in.	150	10	23	39	46
1 in.	125	8	18	32	37

How much money does insulation save home-owners in reduced heating fuel consumption? The table and map show the results of a study on the effects of varied thicknesses of mineral wool in three average small house types in four heating zones.

The study was conducted by the Minneapolis-Honeywell Research Center, with portions based on the American Society of Heating and Air Conditioning Engineers Guide.

Although all costs are approximate, the table shows, for example, that in Zone 3 the sample house with 6 inches of mineral wool in the ceiling and a minimum of 3 inches in walls could be heated annually at a total savings of \$136 on fuel. This means that the cost of wall and ceiling insulation installed—\$420—would be compensated for in three heating seasons.

Critics Applaud 'Prefab' By Frank Lloyd Wright

Prefabricated house in Madison, Wis., designed by Frank Lloyd Wright has brick red roof of asphalt shingles designed with special battens to add distinct shadow lines. Awning windows of ponderosa pine occupy most of entire front wall. Closeup below, show how roof lines and battens on walls accentuate length and width.

The first prefabricated house designed by Frank Lloyd Wright has been praised by critics as being comparable to many homes the great architect has designed for individuals at costs of \$100,000 and more.

Wright's "prefab," manufactured by Marshall Erdman & Associates, of Madison, Wis., is a 3 or 4-bedroom, 2 1/2-bath home that sells for \$35,000 to \$50,000. In exterior appearance, the house is long and low, stretching 83 feet. Its length is accentuated by the unique horizontal battens used on the roof and sidewalls. The roof, of brickered asphalt shingles, has a distinctive double pitch, with ridge off center.

Wright specified asphalt shingles, Erdman says, because they are economical, yet provide a quality roof in keeping with the price range of the house.

Windows—more than 40 of them in awning styles of ponderosa pine—are grouped in long, horizontal bands and in large geometric patterns. Installed in this manner, they give a distinctive appearance to the house, yet go along with one of Wright's mists—that his houses be located on scenic sites, and that the view be unobstructed from inside the house.

Comfort has been provided with complete insulation—3 inches of mineral wool in walls, 4 inches in the ceiling, and 2 inches of special perimeter insulation around the edges of the foundation slab. Air conditioned models have 6 inches of mineral wool in the ceiling.

The living room is 20 by 24 feet, and has a huge fireplace. The kitchen, 12 by 26 feet, is lighted by rows of windows and a skylight, and is adjacent to a family room and dining room.

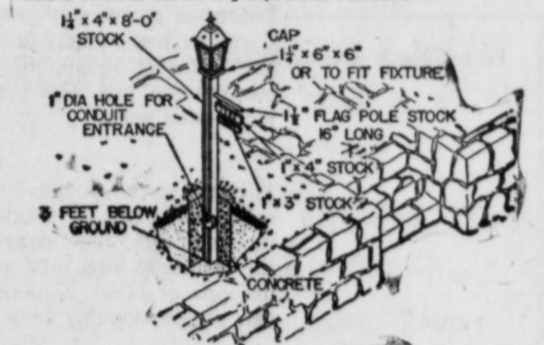

Other features are wood paneled walls throughout, a separate entry with powder room nearby, and a two-car carport with a storage wall. Erdman says he hopes to distribute the house nationally before the end of 1958. "We're looking for 50 dealers across the country who will build the house and exhibit it to the public."

HERE'S HOW

MAKE A LAWN LAMP POST

An attractive lamp post for the lawn may be made of 1 1/2 by 4-inch preservative-treated lumber. The post is 8 feet long, with 3 feet under ground. Use a miter box when cutting the post members to assure square ends. For a square post, rip two pieces of the 1 1/2-inch stock to widths of 1 1/4 inches; or the 1 1/4 by 4 may be used without ripping to produce a post oblong in cross-section. Assemble the post with 8-penny finishing nails and waterproof glue. A hole for the electrical conduit is bored in the lower post.

and another is bored in the center of the 4 by 6-inch cap. Set the post in concrete, and run the conduit through the cap. Attach the cap with nails and glue. The brace for the sign is made of 1 1/4-inch flag pole stock. Bore a hole for the brace and fasten it with glue and a toe-nailed finishing nail. The signs are made of 1 by 4 and 1 by 3-inch lumber, and are hung with small chains. Before starting this project, check his local code for electrical installations.

WRENCH WON'T SLIP
Wrap a strip of rubber electrician's tape around the joint of a chrome plumbing fixture before you attempt repairs. The tape keeps the wrench from marring the chrome, and avoids slippage.

CLEAN GLASS EASILY
Stubborn spots on window glass can be removed with a small amount of toothpaste. Dab the toothpaste on the spot and rub gently with a soft cloth. The denture has a soapy, abrasive action which cleans and polishes.

Hazard, Ky.

Happy is the bride who receives a lovely table like this walnut combination piece by Bodart Furniture, Inc. In the foyer or living room it is a console, in the dining room a server.

This tall Oriental lamp—a replica of a Chinese temple candle—is an ideal reading lamp on a low table next to a lounge chair. The Royal Haeger Lamp Co., Inc. offers it in antique bronze or silver.

Sleek and modern, with a trace of Danish in its lineage, this chair also boasts a moderate price. It is one of several designs in a new line produced by Bassett Furniture Industries.

Handsome in any room, this marble-topped cabinet is white trimmed with gold. The bride will find sliding trays for her silver and space for her large wedding gifts. Brandt Cabinet Works.

Wallpaper Wins Men

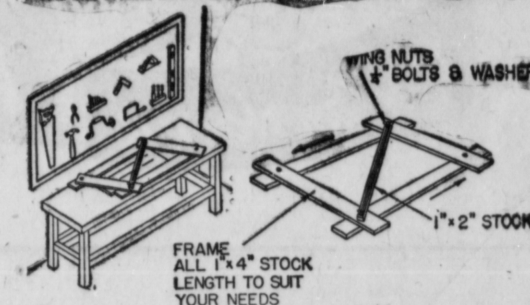

With so many of today's new wallpapers reflecting masculine interests, many men have begun to move in on the selection of wall-papers, especially in choosing a paper for the den or family room. The paper shown above is just the thing for the man who has a yen for sailing, collecting old marine pictures, ship's models or even flotsam and jetsam. The paper is called "China Trade" and shows ships in full sail skimming across a sea of old gold, while wind-worn buildings and feminine figures wistfully look seaward. These figures are colored in sharp accents of sky blue and Chinese red. Other papers catering to masculine interests show old motor cars, old firearms, rare stamps, tin soldiers, art posters, golf clubs and tennis rackets. According to today's decorating trends, most of these papers should be accompanied by textured wall-papers on adjacent walls and ceilings.

HERE'S HOW...

MAKE AN ADJUSTABLE CLAMP FOR GLUING

A handy clamp for use in the home workshop can be folded into small space for storage or transportation. The size of the clamp will depend on the size of the glue-up jobs normally done. Use 1 by 4-inch lumber for the four sides of the clamping frame. Locate the position of the bolt holes in the center line of each piece and 4 inches from the ends. In the bottom pieces, start the holes from the under side, first using a 3/4-inch auger bit, boring 3/4-inch deep, complete the hole with a 9/16-inch bit. This will provide a recess for the bolt heads and allow the frame to lie flat. The adjusting bar is made of 1 by 2-inch lumber, and should be at least 2 inches longer than the diagonal distance across the corners of the frame. Bore a 9/32-inch hole about 1 inch from each end of the bar, connect the edges of the holes with parallel lines, and saw out a slot. Assemble the frame with two 3/4-inch bolts, 1 1/2 inches long at two diagonally opposite corners, and with two 1/4-inch bolts fitted with wing nuts at the opposite corners. Additional holes bored in all members at 4-inch intervals will facilitate adjusting the clamp to small glue-up jobs.

Stone Wall-Facing For Interior

Perma-Stone achieves an attractive decorative effect inside this home. The moulded stone wall-facing, in pleasing color blends, is available through Perma-Stone dealers in all parts of the country.

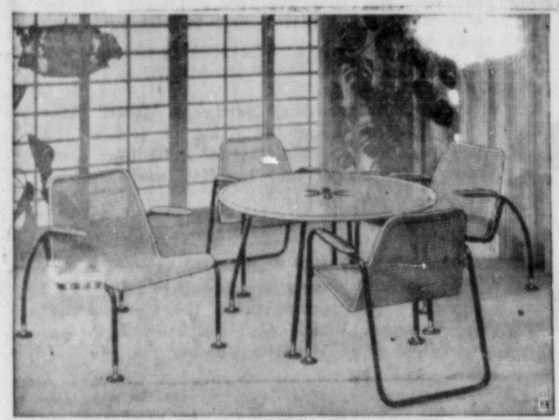

A modern kitchen can also be a bright kitchen with planned and adequate lighting. In this example the central overhead fixture provides the general atmosphere of light for the entire room. Ample illumination for every inch of the counter area is guaranteed by unobtrusive wall brackets and a full width wall bracket above the stove is a cooking must. An indirect recessed light above the sink serves admirably well for the traditional window and has the added advantage of being available 24 hours a day as a light source. Each fixture is individually controlled.

Preferred Colors For U. S. Roofs Are Green, White

Green and white were the favorite roofing colors for homes in the U. S. during 1957, a recently-completed survey shows. The survey, conducted by the Asphalt Roofing Industry Bureau, revealed that of all asphalt shingles shipped in the first nine months of 1957, 31 percent were green or blended green. White was in second place with 26 percent of asphalt shingles shipped. The study shows a slight decline in popularity for green, which led the color field in 1956 with 33 percent of shipments. White, on the other hand, gained from 18 percent in 1956 to 1957's 26 percent.

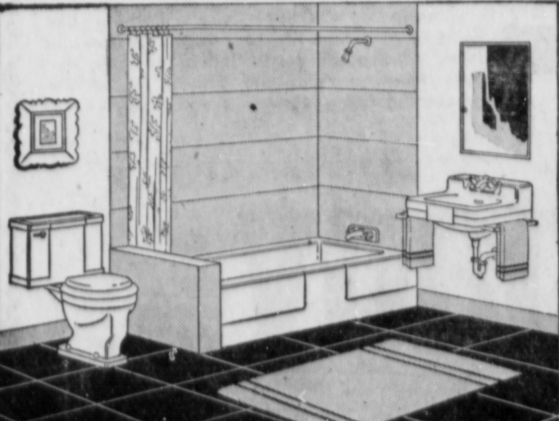

Regional color preferences in asphalt shingles, the survey shows, were: Northeast—White was the favorite with 29 percent of shipments. Black was second, and green third. Southeast—White in first place with 38 percent, followed by green, red, blue, and gray, in that order. Southwest—White led in 1957 shipments with 37 percent. Green was second in popularity, and gray was third. Pacific Coast—Green and gray were equally popular as the preferred asphalt shingle roofing color for 1957, but the survey showed white making substantial gains. Home color stylists agree that the roof color is usually the most important color on the exterior of a home, since the roof generally is the largest expanse visible.

Long-lasting and easily-maintained, tubular steel furniture is popular both in patio, as above and for indoor room groupings. This Lloyd Manufacturing Company group boasts "self-cooling" woven fibre seats.
